Miscellaneous Services

PROJECT

This project includes engineering services required for miscellaneous improvements at the City of Glendale's West Area Water Reclamation Facility (WAWRF) including:

- Design of ventilation improvements for the ultraviolet (UV) disinfection system effluent channel.
- Conceptual analysis and recommendations for improvements to the Raw Sewage Pump Station (RSPS).
- Development of specifications and provision of construction management/inspection services for repainting of exterior metal surfaces at the WAWRF.

The ventilation improvements and repainting specifications will be developed as separate contract bid packages to allow the City of Glendale to obtain the bids from one or more general contractors.

SCOPE OF WORK

EXHIBIT B
Professional Services Agreement

West Area Water Reclamation Facility
Miscellaneous Services

SCOPE OF WORK

INTRODUCTION

The engineering services to be provided under this scope of work will include the following tasks:

1. Perform Project Management
2. Develop Design of Ventilation Improvements at the UV Effluent Channel
3. Conduct Conceptual Analysis of RSPS Improvements
4. Develop Painting Specifications and Provide Inspection Services for Exterior Metal Surfaces
5. Provide Bidding Assistance

The scope of work for each task is fully described below.

Task 1: Perform Project Management

Under this task, the Engineer shall perform overall project management and administration required for each of the improvements identified. Work shall include tracking project progress, conducting project meetings, and providing overall interface and coordination with City staff, contractor(s), and subconsultants.

For budgeting purposes, it is assumed that one project kickoff meeting and a total of up to three general project progress meetings will be conducted with City staff during performance of Tasks 2 through 5.

Task 2: Develop Design of Ventilation Improvements at the UV Effluent Channel

Currently, plant operations is dosing 1.0 mg/l to 1.5 mg/l of chlorine, utilizing sodium hypochlorite solution, downstream of UV effluent channel weir. Due to turbulence at this location and the lack of ventilation, the hypochlorite solution volatilizes, and the hypochlorite vapor migrates toward the UV disinfection equipment upstream of the dosing location. As a result, the stainless steel arms of the UV disinfection equipment are exhibiting signs of chloride induced corrosion. Under this task, Engineer shall perform an analysis to determine the most appropriate means to prevent the stainless steels arms of the UV disinfection equipment from corroding. Improvements that will be evaluated include submerging the dosing tube and/or incorporating fresh air ventilation downstream of the UV

disinfection equipment. After the evaluation and coordination with the City, the Engineer will develop detailed design drawing and specifications incorporating the recommended improvements.

Task 3: Conduct Conceptual Analysis of RSPS Improvements

Under the previous WAWRF Expansion project completed in 2005, in-channel grinder equipment was installed upstream of the RSPS. The purpose of the grinder equipment was to prevent the nuisance clogging of the raw sewage pumps at the RSPS. Currently, operation of the grinder equipment is requiring frequent maintenance and repair that is unacceptable to the plant staff. Under this task, the Engineer will conduct a brief analysis of conceptual alternatives to prevent nuisance clogging of the raw sewage pumps at the RSPS. Alternative improvement concepts will include:

- Replacement of the existing raw sewage pumps with updated non-clogging type pumps, and removal of the in-channel grinder equipment.
- Replacement of the current grinder equipment with improved in-channel grinder equipment.

The Engineer will complete the analysis, including a summary of equipment information, pros/cons, and conceptual cost opinions for each alternative and will present the alternatives and recommendations at a meeting with City staff.

Task 4: Develop Painting Specifications and Provide Inspection Services for Exterior Metal Surfaces

The paint at the existing architectural steel supports and canopy shade structures at WAWRF is exhibiting signs of wear and is delaminating from the prime coat in various locations. In order to ensure that the painting system for the supports and canopy shade structure is maintained and does not lead to further wear and delaminating, the Engineer will review the painting system specified under the original WAWRF and WAWRF Expansion projects and will develop specifications to restore the painting system utilizing compatible products. The Engineer will consult with the manufacturer of the existing paint system to develop the specification which will define the process and procedures that will be utilized to restore/refinish the painting system for the supports and shade structures. Once finalized, the specification will be provided to the City for use in obtaining bids from paint applicators.

Once a paint applicator is selected and the work proceeds, the Engineer shall provide inspection services, including specialty inspections by a qualified ASTM and NACE Certified paint/coating inspector, to inspect the work within the limits of budgeted effort assumed for this task. Inspection services will include:

- Surface preparation and profiling.
- Observation of applications.
- Measurement of coating thickness.
- Environmental monitoring.

- Inspection of substrates between coats.
- Material sampling and testing.

The Engineer will review the painting schedule and will verify that the paint applicator is applying successive coats of paint within the time recommended by the manufacturer based on the ambient conditions. Based upon the recommendation of the special paint/coating inspector, the Engineer shall recommend acceptance or rejection of the paint or coating application.

Task 5: Provide Bidding Assistance

The Engineer will prepare contract documents for bidding purposes which shall contain elements of the miscellaneous improvements developed under Tasks 2 and 4 above as separate packages via public bidding or limited solicitation of quotations. The Engineer shall provide assistance to the City during the bidding process within the limits of budgeted effort for this task. The following bidding process assistance will be performed on an as-needed basis at the request of the City:

Pre-bid Meeting: The Engineer shall assist the City in conducting any pre-bid meetings and walkthroughs. The Engineer shall prepare the required presentation materials and document the meeting and walk-through tours.

Questions/Addenda: During the bidding period, the Engineer shall field questions from perspective bidders and prepare addendums as required. The Engineer shall submit the addendums to the City for reproduction and distribution.

Bid Evaluation and Recommendations: The Engineer shall assist the City in reviewing the bids received on the projects and shall make a recommendation to the City regarding the award.
